## DeScratch Crack + Activation Code

This plugin is dedicated to the removing of scratches from 8 mm color films and we recommend you to look at the demo first, to check how it works. Plugin is compatible with Windows, Linux and Mac OS X (command line only). You may run it from any directory as first command (without any console window, other than the video window for showing). Files: DeScratch.zip (Windows, Linux, Mac OS X) - Plug-in compiled with Autoconf Demo.avi (Windows, Linux, Mac OS X) - Plug-in to show functions of plugin Here are instructions for Linux: 1. Unzip files in any directory. 2. Set up file path to plugin dir in system PATH environment variable. Example: edit ~/.bashrc in your Linux editor (gedit or nano for example) and add at the end of the PATH: export PATH=/path/to/DeScratch/bin:\$PATH 3. Double click on file DeScratch.exe in Windows or run it from console as first command (without any console window). 4. Add some vertical blur (not too much, otherwise it will remove details). Set "Video" property of "Linear Blur" for horizontal or vertical blur. 5. Show "Gradient", "Angle", and "Extrem" tab for selecting non-transparent parts of scratches, one by one. 6. For vertical scratches, select "Vertical" tab and set threshold to the interval from 0 to 4. 7. Show preview, and remove the scratches that are not rejected. Result: We are happy if you try it! Your kind comments will be appreciated. Installation instructions (Windows): 1. Download and extract files to any directory (even in different drives). 2. Edit your Windows PATH environment variable by adding directory of DeScratch plugin bin to the end of PATH, example: set PATH=%PATH%;/path/to/DeScratch/bin 3. Open DeScratch.exe from file explorer and press "Add" button to start plugin. 4. In the "Video" property of "Linear Blur" (or "Vertical" for vertical scratches), set blur intensity. 5. Show "Gradient", "Angle", and "Extrem" tabs, to select non-transparent parts of scratches. 6. Press OK to set threshold value to the interval from 0

## What's New in the DeScratch?

Pixeltope-DeScratch is an image processor plugin. It removes horizontal noise and digital scratches from captured image. It is included in all version of the plugin suite. The project was originally started by Giovanni Scaletta of Italy on a friendnet forum, and later ported to PHP. Usage 1. For removing noise from captured images, you need to activate a plugin which processes captured images. In the original software, it is Pixeltope, but you can use another plugin too. 2. Do not load other plugins (like Pixeltope and DeScratch) in the same time, which will cause some problem. 3. If you are working with R5R, then add an option "Noise on/off" in "Advanced settings". 4. Before using, you need to go to the plugin "control panel" and select a "disponibility" profile. From there you have two ways: a. You can choose with a simple checkbox a subset of settings according to your needs. b. You can save the full settings (all plugins, filters, settings) in a file. You can find this file in "My Profile". Let's see some example The original image below can be processed by Pixeltope-DeScratch, by following settings in the image below. With this settings, we get this result: If you disable the DeScratch plugin, the result would be this: Since the plugin is using the values from the surroundings, some parts of the noise and vertical scratches are removed. To solve it, open DeScratch Settings and you can adjust a few settings to better this effect. In this case, I have selected Noise Off, DeScratch Off, Shadow Residue Off, Horizontal Noise Off, Partially Removed Clipped Areas. The same image is processed in another way, with the following settings: The result is this: With this settings, we get this result: This could be a more visible result, since we have a lot of horizontal noise removed, but still with a little bit of vertical scratches left. What you have to remember: 1. The DeScratch plugin have different options to better your results. 2. If DeScratch is on, then some noise is removed, but not if it is off. 3. If DeScratch is off, some noise is removed but some vertical scratches are left. 4. DeScratch have a speed limit (number of lines) to process. If too much lines are selected, then it will slow down the performance. 5. DeScratch are in continuous rotation mode. If you remove a line, the new line is checked for removing scratches. 6. There is no
