Needed to buy a new laptop after switching from my old HP dv4 with a slow 1.83GHz processor, a giant hard drive and poor battery life. I opted for a bright, white, 14" Dell Ultra Sharp, a nice upgraded IPS screen with a contrast ratio of over 1000:1 and a native resolution of 1920×1080. I was afraid a laptop this bright would make my eyes hurt, but it doesn't. Available light was generally

dimmed at work, so this puts the screen at a pure 100% level. I'm quite happy with the results. I use a MacBook Pro, and the default scaling is too high. I turned the scaling down to 100%, 50%, 25%, but it's still too big. I went to Aperture and edited the Settings so that it only goes down to 50%. This adds some minor text and some of the print screen menus are a little small. You have to manually size the windows, but it worked. I love the adjustment layers, the bring it into Photoshop window and new "cut out the background" feature in the "Analyze" window. Some aspects of this feature are a little clunky. It's been modified to work with layers that have been cut out. So if you cut out a tree and drag it to the "Analyze" window and use the "Cutout" option, the tree will be inside a green box. If you then move it to a new image, it will be black instead of green. This could be problematic. I found that I better used the duplicate layer and then the cut out layer, and deleted the original layer. After that it worked fine. This is a pretty easy to use program. It boosted my photography productivity by about 50%. It's very quick now. In the past 2 months I have taken about 50,000 photos, and was able to get them all prepped in Lightroom on the side in fairly short order. I have yet to have a file that I thought I wouldn't have a chance of getting in there.

In this video, you'll use the Magnetic Layers tool to create a dramatic image. Once you create these magnetic layers with the Layers panel, you can quickly move layers around to achieve the final look you're after. Designer by nature, I spent my time designing collections of clothing for different retailers, then branched out to curate my own clothing, event, and styling projects. Things were fairly easy because I had a pretty good understanding of the industry and knew how to set myself up for success from the start. It didn't take long to get offers to style editorial projects for several well-known brands. With time, I pieced together a strong set of skills that allowed me to easily break into independent graphic design. When I needed graphic design, I would ask my good friend, a professional graphic designer who worked in her spare time. She and I would talk shop and she would give me all of her contacts that could be of use. I quickly began to gain interest in a new area of design: Illustration. Over the next year, I learned how to use Character Shop "Myriad Pro" a little bit about mobile app design, and started a number of personal projects like my blog, Some Kind of Space (Sookundoo), and Paper City. **Stay connected.** To be a true Photoshop master, you need to have the best tools.
