The ability to edit photos on mobile devices is a pretty big deal, and it's a big reason why Adobe announced Photoshop Mix at its launch event. Adobe is calling Mix a "feedback loop for mobile" that gives you the ability to create, edit, and share your mobile photo editing work right from your photos. Where you open, view and finish editing on a mobile device, Mix will then post your edits to your Creative Cloud gallery from there, letting you invite other people to your project. You can then share the editing directly to a social network or save your edit as a new file. "With Photoshop Mix, designers can animate mobile imagery to create photo filters and 48-bit quality artboards for more precise control over details. It all happens in real time, so that you can create and share your mobile edits in one seamless, easy-to-use app," said Giles Martin, CEO and Creative Director at Adobe. "Photoshop Mix is perfect for any professional who takes great photos with their mobile device, and we are excited to deliver the value Adobe has positioned as the editing game-changer for mobile professionals. We're thrilled for the opportunity to deliver this breakthrough mobile capabilities to creatives and anyone who wants to be able to leverage the power of Photoshop right in their mobile editing apps," said John Noughton, president of the European & Middle East region. This feature for design work on small screens removes the need for designers to use mobile apps to work on designs. By consolidating the tools needed to create site designs, mobile and desktop sites into Photoshop, designers may spend less time using apps and experience less lag in page load times. "We're going to be moving away from having web designers develop their sites on non-professional-grade hardware, software, and media," said Scott Bieser, vice president of Adobe Marketing Cloud Technologies.
