As with the iPhone, Photoshop appears to be doing its best to stay up to date. The latest version (20.15) is dated 10/27/18, and it rolled out just last Thursday as a free update to the Mac version of Photoshop. In addition to even more tweaks and changes to the outline/selection tools and the Clone Stamp Tool, the update also significantly improves the color auto-detection function, which now works with color managed files, as well as with Tonal Contrast Curves and Printers. It even improves the behavior of smart object selections, which became less accurate in the previous version. The stasis of Photoshop CS2 notwithstanding (which itself may have been several versions too early), I still think this is the best-designed and most feature-rich photo editing application in any category. If you've never played with AI, it's a great place to start, and if you tend to use a landscape orientation in your work (like I do), Wacom's pen is a natural fit. While there are a bunch of PDF plugins for the iPad, Photoshop Sketch finally feels like it's aimed at creating and editing finished artwork, which is what it always was. It supports a lot of the advanced features, most of which (think Image Masking, Screen Adjustments, etc.) would be prohibitively expensive or exhausting to recreate with other tools. Making the Pencil work well matters a great deal, especially if you're trying to work in a more realistic style. Adobe has perfected making tools work for hand-drawn lines in the last few years, and I have no doubt that it will continue expanding the functionality of this feature-rich application. Swapping in the Apple Pencil has generally been seamless, and in Mac mode it works well enough that I've mostly stopped bothering to switch over to it, as long as I've set the tool to process transparent areas. In Photoshop Sketch, it really shines.
