About The Books (or as they are sometimes referred to, BITS) is a major fiction site based in Vancouver. BITS has been developed by a group of young people interested in the development of original short stories. With a wide variety of genres available as part of their website, BITS aims to give its users the opportunity to create both short story and novel websites. While the main focus of BITS is to produce original work, BITS also offers a system where people can upload a novel for others to review, and by doing so, provide BITS users with a chance to read and comment on the novel. BITS also boasts a large catalog of interactive content, especially in the genre of interactive fiction. This blog has no commercial purpose. U.S. Pat. No. 5,199,471, to Crawford et al., which is incorporated by reference as if fully set forth herein, discloses, inter alia, an acoustic detection system for acoustic imaging. A transducer emits a beam of ultrasonic pulses that is reflected from the moving medium as the medium passes through the region of interest. The reflected acoustic pulses are received and processed in an electronic signal processing chain that develops time-varying data that represent the magnitude and timing of the detected reflected signals. This data is digitized and stored in a digital memory that can be accessed via a digital display. The data can also be analyzed in accordance with conventional ultrasonic imaging procedures.
