Adobe Photoshop CC also introduces the Retouch module. This new feature allows for the manual retouching of images based upon a series of colored guides. This Retouch option is available within the new adjustment layers only, and can also be used as the basis for creating new adjustment layers. The toolset for both Basic and Expert image retouching adjusts the reliance of the Photoshop community to various blending modes. The more authentic blending modes have been retired, and new modes have been introduced. These include Soft Light, Linear Light, Darker Color and Color Burn. The selection enhancement tools provide excellent results, and deliver very similar results to the Magic Wand tool in Lightroom. The adjustment layer tools are excellent, and allow for fine-tuned control of an image when working in either Photoshop Adjustment Layers or in your RAW editor. While most of the tools tend to not have a wide variety of presets, they do allow you to select a custom set of adjustments for that specific filter. This is a welcome update for anyone who still relies on pre-set presets. The biggest complaints that I have seen are that the new Clothing, Layers, and Paths tools don't work as well as the ones in Photoshop CS5. While some tutorials are out there that will help you get the most out of these tools, if you're a seasoned user of Photoshop, you should have no trouble finding your way around them. For those who are new to the program, the new tools may leave you frustrated at first, but it's a small price to pay for the benefits of this upgrade.
