username/password I have a large Oracle database that I am connected to via SQL Developer. I am using a local username and password (name, password in etc/sqldeveloper.properties) that I have been using for a while. I now want to change the information so I can connect from a different computer, without the username/password. I have created a new user in the database and set the credentials to blank but it does not work when I try to connect. I tried: setting the connection string as Username="" and Password="" setting the credentials to blank All attempts failed. So, is there a way to connect to Oracle with blank credentials? A: This worked: Removing the following line from sqldeveloper.properties --preferred-username= and instead setting the credentials to --preferred-connection-type= eg. --preferred
